

Accomplishing Excellence through our Specialised Service Offering for a Global Professional Services Firm

Client:

A global professional services firm delivering digital transformation by putting digital and data to work to create competitive advantage.

Challenge:

Client wanted to quickly deploy a team of 25 Artificial Intelligence resources in 8 weeks.

Result:

The best 15 candidates were immediately deployed by the client and rest went for an extended training of 2 weeks. We could deploy 80% of the requisite in the timeline of 2 months and the rest 20% in an additional period of one month.

Solution:

Since the requisite was on a niche technology and resources were hard to find, we had agreed for Hire, Train & Deploy model with the client for this assignment. We started with identifying candidates who were interested to learn RPA. Interested candidates were showcased to client and the pilot batch of training was provided to 35 shortlisted candidates. Training was for 6 weeks – Four Weeks Class room and Two weeks hands on. At the end of the training, candidates were again interviewed by the client to check the fitment.

Client Response:

The client was very happy with the turnaround time and quality of the resources provided and have been continually engaging with iLabs as their preferred partner for their other project requirements.
